SEPTEMBER 2008

ACE Westchester Launches Endorsements for Green Construction

ACE Westchester Commercial Inland Marine announces the availability of four new endorsements for "Green" construction.

The endorsements address a client's potential financial loss from:

- Changes in environmental standards
- Repairs with green materials
- Additional debris removal expenses and
- Loss of tax credits

The above endorsements are available in most jurisdictions immediately.

Contractors, developers and owners in the green building segment recognize the benefits of making positive impacts on the environment. In addition, other changes can also occur, such as reductions in operating costs, increased energy efficiency and marketability, reduced operating costs, and potentially increased tenant productivity.

John Berger, President of Inland Marine, ACE Westchester said, "These added endorsements demonstrate our continued commitment to this class of business, and more importantly, ACE Westchester's overall commitment to a greener environment."

He added that, "ACE Westchester is committed to providing flexible, innovative risk management solutions to address client exposures who are building in an environmentally sensitive and progressive manner."

ACE Westchester Inland Marine sells Commercial Inland Marine products through excess and surplus lines producers on an admitted and non-admitted basis throughout the U.S.
